

# GLOBALGIG SIP TRUNKING SOLUTION

Secure and Seamless SIP Connections For Global Enterprise Communications

SIP Trunking from Globalgig offers a flexible migration path to your next-generation communications infrastructure.

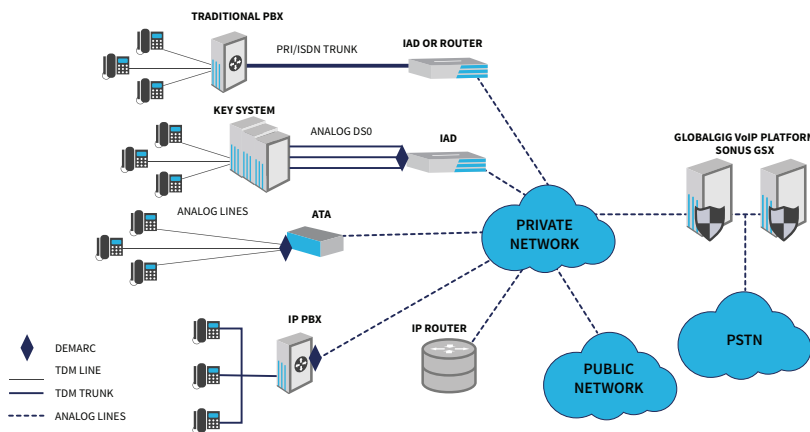

## Lay the Foundation for Flexible IP Communication Services

SIP Trunking adds comprehensive voice services over your existing network infrastructure, allowing you to replace traditional analog lines or PRI circuits with more flexible and feature-rich IP voice services. Our solution enhances your company's ability to optimize network usage and can easily scale as you grow. With Globalgig, your business voice services are delivered securely and dependably over our private IP network and not the public Internet.

Through SIP Trunking, your enterprise will recognize significant savings while maintaining high quality of service. Globalgig can design one converged IP network optimized to meet your global data and voice communication needs.

## Multiple Enterprise Configurations Supported

Globalgig supports SIP Trunking for enterprises at all phases of VoIP adoption. Whatever your current configuration or future requirements are, we can deploy a customized solution while maintaining your present functionality.

### Key Benefits

#### Cost Savings:

Replace costly PRI circuits or analog phone lines by integrating data and voice traffic onto one converged network

#### Higher Calling Capacity:

Leverage voice compression to deliver more simultaneous voice calls on the same bandwidth

#### Private Network:

Superior performance and call quality on Globalgig's private network

#### Global Reach:

Achieve global SIP connectivity through Globalgig's extensive coverage

#### Resiliency:

Extensive network connections to global carriers providing diverse paths and redundancy

#### One Stop Shop:

All network and voice services with one provider, one bill and one support desk

# Save costs all around

Leverage local DIDs and portability in over 60 countries & 2,700 cities

## Global Coverage and Extensive Carrier Connectivity

By avoiding expensive TDM gateway and desktop equipment, and eliminating the need to maintain an interface between IP voice and the PSTN, SIP Trunking significantly reduces capital costs.

Additionally, elimination of local PRI/T-1 circuits lowers monthly telecom costs.

## Leverage the Benefits of IP

By avoiding expensive analog lines or PRI circuits, and eliminating the need to maintain an interface between your voice system and the PSTN, SIP Trunking significantly reduces capital and monthly operating costs.

With unlimited local calling included in the service charge and flexible long distance calling plans, you can achieve more predictable monthly expenses. Additional cost reductions can also come from toll-free calling and outbound international calls. Our extensive DID footprint means you can establish local numbers in each market rather than relying on toll-free services.

## Solutions Include

### SIP Trunking

- Local Dial Tone
- Long Distance-National
- Long Distance-International
- Toll-Free-National
- International Toll-Free Services
- Direct-Inward-Dial
- Caller-ID Name Data (CNAM)
- Directory Listing

- Custom Call Routing Plans
