

# 4G LTE FOR TEMPORARY, MOBILE AND REMOTE CONNECTIONS

Today's enterprise must have on-demand access to data services to prevent interruption to the business continuum. Connectivity needs to span across geographic borders, offices, diverse communications technologies and disparate devices, all in real-time to achieve maximum productivity, agility and efficiency.

Security is key to every business, and when you use public or guest WiFi networks, you cannot guarantee your data isn't being shared with others. With a fixed mobile solution enterprises can rest assured that sensitive data is secure.

Quick and convenient, fixed mobile services eradicate the need to tether which can often be a poor, expensive and inconvenient way to access data, and also provides the chance to offer WiFi as an additional service that can be part of any business.

Business continuity and securing customer relations is essential. Mobile retail and pop-up shops can go about their business as normal with access to all their systems while making sure every point of sale is supported.

## When to use Fixed Mobile:

### Temporary connection

While waiting for your fixed line to be installed or need a short term connection:

- Construction site, shop or office fit-out
- Sport and entertainment events, conferences

### Mobile Office

When your work has you constantly on the move:

- In-car office
- Road shows
- Tours
- Mobile classrooms
- Client site

### Remote office

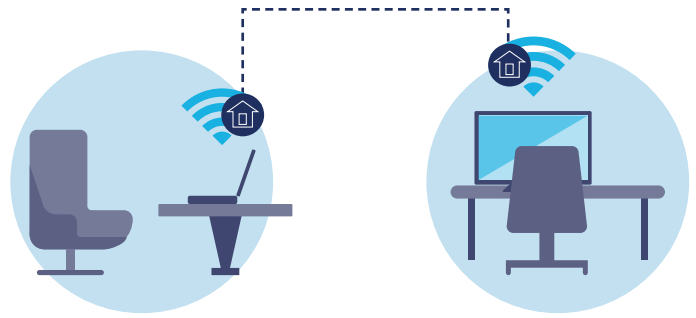

Any area that a traditional cable doesn't support:

- Rural Office
- Oil Fields
- Park and wild life conservations centers

## Examples of Fixed Mobile in action:

### Temporary office

Getting an instant day one connection to a temporary office can be an important step in getting your business up and running. When you want to ensure network connectivity to your remote and telecommuting workforce quickly and easily, 4G/LTE solution is great option. At temporary locations such as construction sites, employee home offices, and sales/marketing suites where reliable access to head office or data centers is critical, wireless service delivers flexible bandwidth needed to connect your employees.

### Mobile office

To keep up with business while out of the office, employees need access to online storage information, product & marketing materials and stock reports all in real time.

Globalgig's customer, Automobile Association uses the Globalgig mobile office solution to download the latest guides, instructions & firmware for the multitude of vehicles they support, but also allows them to file reports and update schedules when they're in between jobs.

### Remote office

Offices can be remote for a number of reason. Cable or fibre may be out of reach, or isn't available at all.

Industrial locations that are located off the grid, are exposed to fluctuating temperatures, extreme pressure, and vibration require a robust wireless solution that could be easily integrated with their existing serial network.

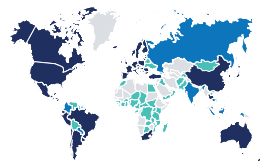

#### Device/Hardware

Globalgig tailors plans your solution and then configures and install your hardware for you.

#### Data Bundles

Depending on your requirements, Globalgig will custom your data plans from individual data allocation to a shared pool.

#### Network Coverage

Globalgig is available in over 200 countries keeping you connected wherever your work takes you.

#### Portal

The cloud portals allow you and us to monitor diagnostics, usage and connectivity, eliminating IT call outs.

## About Globalgig

Globalgig orchestrates hyperconnectivity for the enterprise business continuum using managed communications solutions. Globalgig provides wireless connectivity across a 200-plus country footprint and offers a full suite of communications services and products including Hosted VoIP, Mobile Device Management, Wi-Fi Hotspots, Remote Office and Backup, Technology Expense Management and IoT/M2M connectivity solutions. Globalgig is headquartered in San Antonio, Texas, with offices across the U.S., and in London and Sydney.
