Global Networking
A Single, Managed Network Built Exclusively for Your Enterprise

As bandwidth-intensive services, cloud-based applications, and globally dispersed workforces continue to increase in demand, enterprises require networking solutions that can keep pace. Globalgig's suite of flexible and scalable Global Networking services can help you successfully meet these challenges. Leveraging our global supplier relationships in over 200 countries, we deliver unified, high-performance connectivity with the simplicity of a single network partner, invoice, contract, and support team.

The Globalgig Difference

Reach Everywhere
- Connect with services worldwide through our partnerships with top global carriers.
- As a global MVNO, we also offer wireless networking worldwide to reach the most remote locations.

High-quality Connectivity
- We deliver the optimized performance your business requires through a range of features, including service-level agreements, scalable and guaranteed bandwidth, public and private networking, and more.

Increased Efficiency
- Streamline your networking experience by partnering with us for a complete, global solution.
- Our Managed Network Services allow you to concentrate on your core competencies while we handle your networking requirements.

Choice and Flexibility
- Choose from a wide range of service options, speeds, and configurations for both Internet and Private Networking.
- Our Managed Network Services offer three different tiers of support, each tailored to meet your specific needs and budget.

Our Suite of Services

Internet

Take advantage of Globalgig's diverse Internet offerings designed to meet the unique performance requirements, geographic reach, and budget of your global enterprise. Our services provide diverse access types, service-level guarantees, worldwide coverage, support for SD-WAN, and other features and benefits.

Broadband Internet

Broadband Internet delivers cost-effective reliable connectivity that can be used to connect critical infrastructure for SD-WAN or remote workers and sites.

- DSL, FTTx, cable, fixed wireless, and microwave options
- Symmetric or asymmetric services
- Service level guarantees

Wireless Broadband

Wireless Broadband provides affordable, always-on 5G connectivity. Wireless Broadband can be used as a standalone connection or as a critical component of your SD-WAN service, allowing you to extend the reach of your network. Wireless Broadband delivers:

- Affordable data bundles and customized data plans
- No restrictions on data, daily allowances, or throttling
- Shared data buckets and pooling of diverse carrier SIMs
- Ability to reach remote and inaccessible locations
- Immediate connectivity, including in the case of an emergency

Dedicated Internet Access (DIA)

Dedicated Internet Access (DIA) offers high-performance and low-latency connectivity to power mission-critical applications. This service provides a private, dedicated connection that is ideal as the primary connectivity for your SD-WAN. Our DIA service includes:

- Guaranteed internet bandwidth
- Access to leading ASNs worldwide
- Global reach, connecting you across six continents
- Network monitoring by our experienced NOC staff
- IP addressing included
- Complete service level agreement

IP Transit

IP Transit delivers the fast and highly reliable connectivity your enterprise demands. Our relationships with global carriers and the world's largest Tier 1-IP networks, enable us to build the right solution for you. The service delivers:

- Global IP transit and the convenience of working with one provider
- Service implementations performed by experienced project managers and network engineers for timely and accurate service delivery
- DNS support and specialized routing
- Complete service level agreement

Private Networking

Private Networking from Globalgig offers enterprises a range of secure and flexible connectivity solutions in over 200 countries worldwide. Benefit from a dedicated connection that is not shared with other organizations, providing a higher level of security and reliability.

Ethernet Private Line (EPL)

Ethernet Private Line (EPL) provides reliable, dedicated point-to-point connectivity with complete separation, privacy, and predictable performance for the most sensitive traffic. Ethernet Private Lines can also be provisioned quickly, with scalable bandwidth that provides organizations with the flexibility they need to grow.

Ethernet Virtual Private Line (EVPL)

Ethernet Virtual Private Line (EVPL) offers similar benefits to EPL, but with the added flexibility to support point-to-point, point-to-multipoint, and mesh configurations. Both EPL and EVPL can be used for connectivity in SD-WAN deployments and offer higher data security compared to public internet solutions.

VPLS

VPLS extends your LAN across the WAN, providing secure and seamless Ethernet connectivity without requiring specialized WAN expertise or costly additional equipment. The service provides scalable bandwidth capacity necessary for bandwidth-intensive applications. Additionally, it is highly flexible and can support various applications and network topologies, featuring Quality of Service (QoS) capabilities that allow for the prioritization of specific traffic types.

MPLS IP VPN

MPLS IP VPN is ideal for mission-critical services, providing private, high-performance, and secure IP connectivity. The service delivers any-to-any networking to connect offices, data centers, and cloud-based applications. It allows for traffic prioritization for your most important traffic, and our MPLS solution is backed by service level guarantees. It offers the network security that enterprise customers demand, delivering peace of mind and ensuring your business is safeguarded from threats.

Managed Network Services

Globalgig Managed Network Services expand your team's expertise and capabilities and keep your network running at optimal levels, 24x7. We provide full network and device management, including monitoring, alarming, configuration, and support, so you can focus on your business.

Why Globalgig Managed Services

Flexible Service Levels

Three service tiers, ranging from monitoring to network and flow intelligence.

Real-time View

Dashboard and reporting from industry-leading monitoring systems that offer complete visibility into your network environment.

Reduced Complexity

Take advantage of an integrated view across your entire network infrastructure and a single point of contact.

Support for Peace-of-Mind

We work to resolve any issues and reduce their impact on your business.

Network Resilience and User Productivity

Meet business continuity goals and improve access and performance of corporate applications.

Service Advantage Team

Our Plus and Premier customers also have direct access to our Service Advantage Team (SAT), which offers support that goes far beyond that of traditional Network Operations Center (NOC) staff. Benefits include real-time information sharing, proactive issue resolution, and a strategic plan on how to best evolve your network to meet your future needs.

Professional Services

Offered on an hourly or project basis, Professional Services are available to help you with on-demand tasks or those that require talent sourced outside your enterprise. Our Professional Services team is available to supplement your IT staff with three tiers of services, including Remote Hands and Basic Troubleshooting, Support and Configuration, and Design, Architecture, and Implementation.
