globalgig

One Wireless Provider, Worldwide

Experience the ease and convenience of partnering with a single wireless provider for all your mobility and IoT connectivity needs worldwide. Globalgig offers a range of solutions, including Wireless Networking, Wireless Broadband, Private LTE/5G, and IoT, with expansive coverage, diverse networks, and custom rate plans tailored to your enterprise. Our team of experts and single management portal ensure seamless service across the globe.

Our Suite of Mobility Services

Wireless Networking

Wireless Networking offers complete wireless connectivity for primary networks, temporary connections, backup connectivity, failover, and out-of-band management access. The comprehensive service includes wireless LTE or 5G connectivity, a full suite of wireless devices and router hardware, and complete managed services options.

Achieve complete wireless 4G LTE or 5G connectivity across your network, including temporary connections, backup connectivity, failover and out-of-band management.

Wireless Broadband

Unleash the power of wireless with affordable, always-on, unlimited 5G connectivity. Replace traditional broadband with a complete solution, including wireless service and equipment for fast and reliable data access.

IoT Connectivity

The Internet of Things (IoT) revolutionizes industries from agriculture to manufacturing. New, real-time data sources change how companies manage and optimize processes and compete globally. Receive the high-performance connectivity IoT applications require, as well as worldwide coverage and technology options tailored for each use case, all via a single provider.

Private LTE

Break free from the limitations of Wi-Fi networking and achieve ubiquitous coverage even in challenging environments and facilities with high device density. Combine a LAN's fixed cost with LTE's flexibility, security, coverage and mobility benefits, and benefit from expansive connectivity for any environment.

SIM Management

As the work landscape evolves, embracing a mix of remote, in-office, and increasingly mobile work environments, enterprises and employees increasingly depend on reliable connectivity to critical business applications. IoT devices, even in remote locations, require high-quality network connections to deliver business value. Connect your enterprise ubiquitously and seamlessly worldwide with the broadest choice in SIMs and access to Orchestra, Globalgig's self-service SIM management platform.
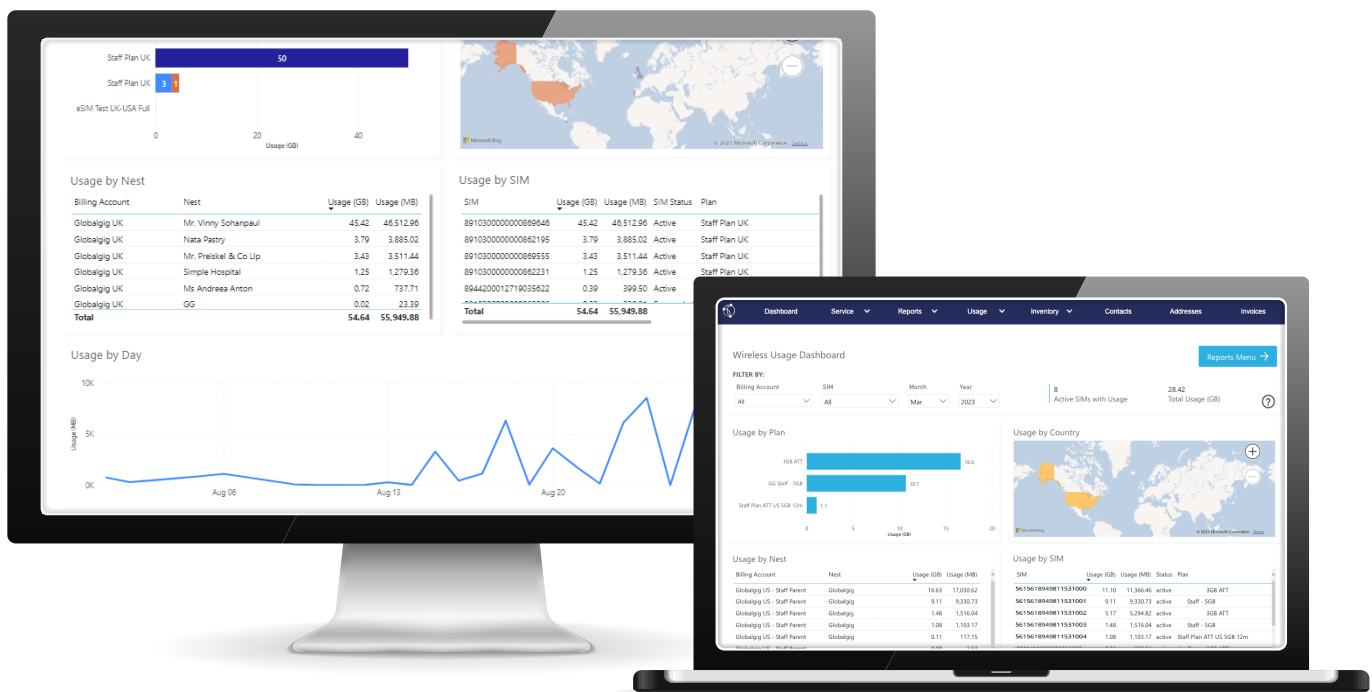

Flexibility, Simplicity, and Reach

Globalgig aims to simplify IoT connectivity and mobility by offering connectivity services across 600+ carriers worldwide, all through a single point of contact. We offer flexible service options that allow customers to combine carriers and tailor plans to meet a range of operational and pricing needs.

With Globalgig, customers can create affordable data bundles, creating completely bespoke data plan solutions to meet their teams where they are.

Comprehensive Mobility & IoT Management with One Portal

Orchestra is Globalgig's SIM management and intelligence platform that provides comprehensive IoT management through a single portal. Customers can manage SIM inventories, access data plan subscriptions, and view detailed data usage for each SIM, all through a user-friendly interface. The platform offers powerful API integration, enabling administrators to manage IoT applications more efficiently and reducing the number of management points required.

About Globalgig

As a leading global managed service provider and mobile virtual network operator, Globalgig offers a comprehensive portfolio of managed communications services. Benefit from our expansive reach across 200+ countries while enjoying the optimized customer experience of a single service provider.
