

Cloud Connect

Simplifying Global Cloud Connectivity

Cloud Connect at a Glance

Cloud Connect integrates on-premises and cloud infrastructure, providing secure, high-speed connections, improving network performance, and reducing costs.

Cloud Connect is designed to connect on-premises infrastructure directly with cloud-based services such as AWS, Azure, Google Cloud, or virtually any cloud service provider. Our adaptable solution ensures reliable and scalable connectivity, strengthening your network's performance while reducing costs.

Implement high-speed, low-latency connections that can enhance your cloud-based applications. Experience secure, resilient, and scalable connectivity, ensuring seamless data transfers and allowing your business to rapidly deploy global private connectivity with one platform managing every connection.

Key Features and Benefits

- ✔ Connect to leading service providers anytime, anywhere, with ease, and ensure your data remains secure with private connections.
- ✔ Seamlessly blend your on-premises infrastructure with powerful cloud services and extend SD-WAN capabilities to the cloud edge for superior visibility and control.
- ✔ Security is top priority. Swiftly create secure paths, enhancing the overall security of your enterprise network.
- ✔ Optimize cloud-to-cloud connectivity with virtual routing at the cloud edge and experience low latency and high-speed performance, eliminating the need for unnecessary backhaul.
- ✔ Design robust failover and network redundancy while effortlessly adjusting bandwidth and resources to scale with your growing business needs.

Achieve Business Continuity

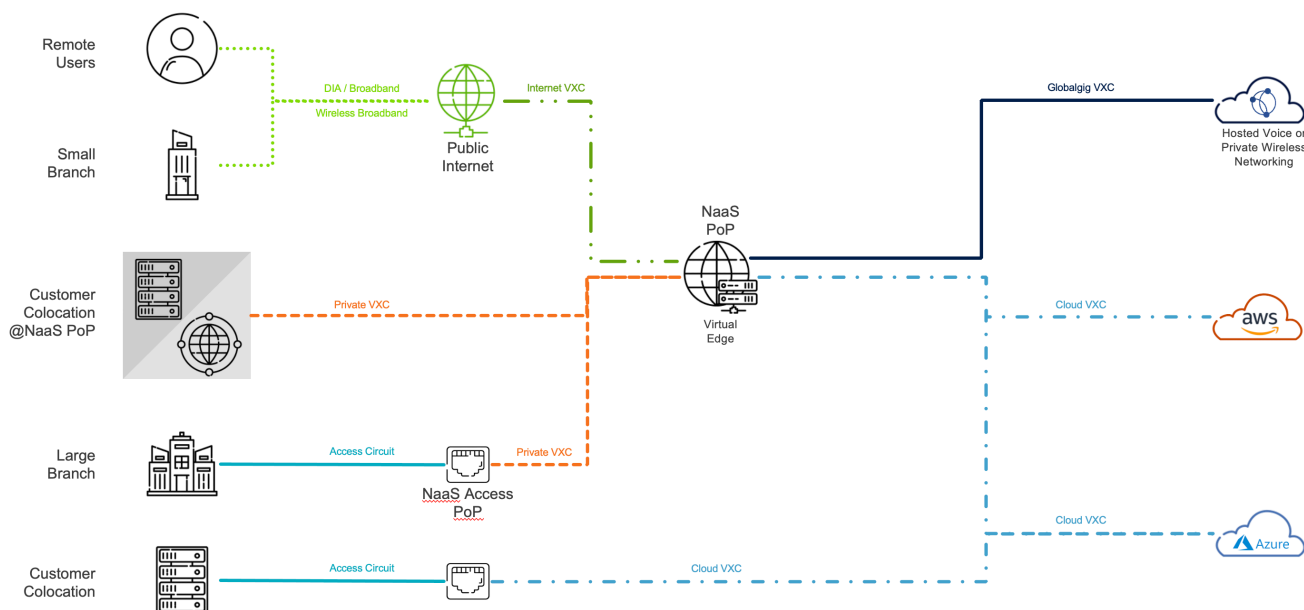

For disaster recovery and business continuity, Cloud Connect allows for data replication between premises and cloud environments, minimizing disruptions. Resilient design ensures continuous access to your cloud services, protecting your business operations.

Cloud Connect offers unmatched flexibility and agility, enabling dynamic scaling to meet your changing business requirements. By optimizing data transfer and leveraging scalable resources, you can reduce or eliminate the fixed costs of maintaining on-premises hardware. Our solution allows you to build and adjust bandwidth as needed, ensuring you only pay for what you use. Whether connecting to cloud service providers, integrating hybrid clouds, or facilitating cloud-to-cloud networking, our platform seamlessly supports your growing needs.

Unify Your Network Solution

Enterprise Configuration

Seamlessly integrate with our SD-WAN and Managed Network Services (MNS) to provide a comprehensive networking solution. This integration ensures superior visibility and control over your entire network, enhancing performance, security, and scalability.

- **Extend SD-WAN capabilities** to the cloud edge for superior visibility and control.
- Manage your network all the way to the cloud with proactive monitoring, reporting, and support to **maintain optimal network operations**.
- **Keep your network running smoothly** with comprehensive device management, including configuration, updates, and troubleshooting.
- Integrate Cloud Connect with our managed network portal, Orchestra Insight, to leverage AI-driven intelligence, reduce notification noise, highlight critical events, and **gain complete control over your network** assets.

About Globalgig

As a managed communication platform provider and global mobile virtual network operator (MVNO), we provide integrated global networking solutions to enterprise customers worldwide.

Our core focus is business outcomes and how we can help you achieve them –through an innovative managed communication platform that drives digital transformation and business success.

We deliver the power of choice across technologies, access methods, and carriers, connecting you to all the geographies and applications you require. And we make it easy by working with a single global service provider and the best team in the business.
